San Jacinto In Brief

San Jacinto’s receipts from October through December were 9.8% above the fourth sales period in 2018. Excluding reporting aberrations, actual sales were up 6.3%.

Continued growth from the county-wide use tax pool allocation and strong service station sales were primarily responsible for the overall positive quarter.

An uptick in casual dining also contributed to the overall net gain.

The City experienced negative returns from electronics/appliance stores and contractors, and building and construction receipts were lower than county and state trends for the fifth consecutive quarter, which offset the positive quarterly results.

Net of aberrations, taxable sales for all of Riverside County grew 4.8% over the comparable time period; the Southern California region was up 4.4%.

California Overall
Statewide sales and use tax receipts from 2019’s fourth quarter were 4.2% higher than last year’s holiday quarter after factoring for accounting anomalies. The increase came from the acceleration in online shopping which generated huge gains in the countywide use tax pools for merchandise shipped from out-of-state and from California based fulfillment warehouses in those cases where the warehouse is also point-of-sale. This segment was further boosted by the first full quarter of California’s implementation of the Wayfair vs South Dakota ruling that requires out-of-state retailers to collect and remit sales tax on merchandise sold to California customers. The ruling has led to an increase in sales tax receipts of roughly $2.95 per capita while also producing double digit gains for in-state online fulfillment centers.

In contrast, soft sales and closeouts resulted in a decline in almost every category of brick-and-mortar spending during the holiday season while new cannabis retailers helped boost what would have been a soft quarter for the food-drug group. Most other sales categories including new cars and business-industrial purchases were also down. Restaurant group gains were modest compared to previous quarters.

Overall, the rise in county pool receipts offset what would have been otherwise, a flat or depressed quarter for most jurisdictions.

Covid-19
The coronavirus impact will first be seen in next quarter’s data reflecting January through March sales. Based on recovery rates being reported in some Asian countries, the virus’s disruption of supply chains will be deepest in the first and second quarter and largely resolved by mid-summer. However, recovery from social distancing and home confinements could take longer with the deepest tax declines expected in the restaurant/hospitality, travel/transportation and brick-and-mortar retail segments. Layoffs and furloughs are also expected to reduce purchases of new cars and other high cost durable goods. The losses from the state’s high-tech innovation industries may be more modest while the food-drug and online retail groups could exhibit increases.

Assuming that the virus is largest contained by the end of September, HdL’s economic scenario projects that tax declines will bottom out in the first quarter of 2021 but with only moderate gains for several quarters after. Data from previous downturns suggests that the return to previous spending is not immediate and often evolves. Businesses emerge with ways to operate with fewer employees and more moderate capital investment. Consumers take time to fully get back to previous levels of leisure travel, dining and spending and may permanently transfer to newly discovered services, activities and/or online retail options.
