

Printing Services RFQ FAQs

1. We have no way of knowing what inflation rates will be and what the availability of paper will be in the coming months and years.

How should we address the inflation factor for the coming months, not just 4 and 5 years out?

- Each respondent's proposed pricing should be fully inclusive of all costs, including rates, supplies, and any other costs to provide the printing services outlined in this RFQ. The proposal should factor any expected price adjustments and potential supply shortages during the initial agreement period. The cost escalators for years 4 and 5 are considered pay rate increases of the initial agreement. They are usually reflected as percentages (e.g. Cost escalator for year 4 = initial agreement price + $x\%$).
