

Notice of Study Commencement Northwest Area 1 Sanitary Servicing Study

The City of St. Thomas has retained Dillon Consulting Limited (Dillon) to complete a Class Environmental Assessment (EA) Study to develop new sanitary servicing infrastructure to support the new urban growth area in the northwest corner of the City of St. Thomas as identified in the City's Positioned for Growth Study. This Class EA will evaluate alternatives for a new sanitary sewage pumping station, upgrading the existing Sunset Drive sewage pumping station, and new sanitary forcemains and gravity sewers to provide sanitary servicing to the new growth area.

The Northwest Area 1 Sanitary Servicing Class EA Study is being completed with the appropriate steps outlined in Schedule B of the Municipal Class Environmental Assessment (MCEA) (2000, as amended).

Upon completion of the study, a Project File Report (PFR) documenting the process will be available for public comment for a period of at least 30 calendar days.

PUBLIC CONSULTATION

The public consultation process is vital to this Study and the City wants to ensure that anyone with interest in the project has the opportunity to provide input. A Public Information Centre (PIC) is planned for winter/spring 2021 to present the problem/opportunity statement and alternative solutions and gather further input on the project.

Information collected will be used in accordance with the Municipal Freedom of Information and Protection of Privacy Act. With the exception of personal information, all comments will become part of the public record.

For more information or if you wish to be placed on the study's mailing list, contact either:
