Animal Shelters in 2060

People in 2060 will probably have more pets than people do now. Since there will be automated helpers or robots to help them take care of their pets. So they can go to work and know their pets is doing fine without them. Which will lead to more people buying pets and less pets being euthanized.

Animal shelters in 2060 will have bigger buildings or areas to keep animals so they don't have to euthanize as many animals because of overcrowding. Also, animal shelters will have more advanced technology like nano trackers inside the animals, more advanced collars for the animals and better cages for the animals.

Many animals have anxiety when near other animals, so there could be special rooms for them with soundproof walls, so they don't hear other dogs barking. Special trainers will try to help them overcome the anxiety so they can be near other animals.

Another thing animal shelters would have would be indoor and outdoor fields so all the animals can have daily exercise/ daily fun.

While having all these things they will need volunteers and supporters to help out with the animals and make sure they are safe.

In conclusion, more people will have pets and there will be more improvements to animal shelters by 2060.
